```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                    The present invention relates to coding sequences of the murine 1F7 anti-idiotypic antibody complementarity-determining region (CDR) or framework-determining region (FR). The antibody binds to human or primate anti-human immunodeficiency virus (HTV) antibodies and can be used in the treatment of HIV infection. The present sequence is the 1F7 heavy chain

The present invention relates to coding sequences of the murine 1F7 anti-idiotypic antibody complementarity-determining region (CPR) or framework-determining region (FR). The antibody binds to human or primate anti-human immunodeficiency virus (HIV) antibodies and can be used in the treatment of HIV infection. The present sequence is the 1F7 heavy chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120

The sequences are used in the production chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic rhintis, conjunctivitis, atopic dermatitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, host-versus-graft disease and renal disease, rhey are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 CAGGITACTCTGAAAGAGICTGGCCCTGGGAIATTGCAGCCCTCCCAGACCCTCAGTCTG

The antibody is a chimeric or minanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence encodes the heavy chain variable region of murine/human interleukin-4 (IL-4) chimeric antibody 3B9. The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic dermatitis, acopic asthma, anaphylactic shock, rheumatoid arthritis, host-versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CAGCCTTCAGGAAAGGGTCTGGAGTGGCTGGCACACATTTACTGGGATGATGACAAGCGC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents the DNA encoding the light chain of the chimeric 3B9 antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgB) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

The present invention relates to new humanized immunoglobulin (Ig) light chain (LC) or heavy chain (HC) comprising variable region complementarity determining regions from 16/1005 Ig LC or HC variable region sequence, and variable framework region from human acceptor Ig LC or HC sequence. The invention is useful for preventing or treating an amyloidogenic fisase or Alzheimer's disease in a patient. The invention is also useful for in vivo imaging amyloid deposits in a patient. The present nucleic acid sequence encodes a mouse 306/1005 variable light (VL) chain or variable heavy (VH) chain protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      117
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ACTIGITCITTCTCTGGGTTTTCACTGAGCACTTCTGGTATGGGTGTGAGCTGGATTCGA 120

The antibody has the ability to neutralise human immunodeficiency virus. The antibody is classified as 1gG kappa and has the sequence RIGPGR or RVGPGR in the principal neutralising domain. The antibody may be used to neutralise the clinically separate strains which cannot be neitralised by the neutralising antibodies against IIIB and IIIMN strains.

This polypeptide ihibits the binding of human IL-6 to its receptor, and can therefore useful in the treatment of a variety of autoimmune diseases; specifically in the treatment of rheumatoid architis, septic shock due to bacterial infection and multiple myeloma. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Polypeptide inhibiting binding of human interleukin-6 (IL-6) to its receptor - useful for treating auto:immune disease induced or aggravated by IL-6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Shimamura T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               357
murine anti-protein C monoclonal antibody HPC-4 heavy chain variable region (VH gamma). HPC-4 recognises the activation peptide region profess of the heavy chain of protein C, a vitemin K-dependent plasma protein zymogen. Protein C is activated to activated protein C (APC) by cleavage between the Arg-Leu amino acid contained within the activation peptide sequence. HPC-4 prevents protein C activation to APC by binding to this region. The DNA sequences encoding the variable regions of the heavy and light chains of the antibody (AAT09299-302) AAT09303-9. The humanised antibodies using the PCK primers AAT09303-9. The humanised antibodies using the PCK primers AAT09303-9. The humanised antibodies were useful as inhibitors of coagulation and can be used for the treatment of tumours by inhibiting the anticoagulant activity of APC by preventing conversion of protein C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

  This is the nucleotide sequence encoding the heavy chain variable region recognises the activation peptide region (AAR88106) of the heavy chain of protein C wonoclonal antibody HPC-4 which variation peptide region (AAR88106) of the heavy chain of protein C, a vitamin K-dependent plasma protein zymogen. Protein C is converted to activated protein C (APC) by cleavage between the Arg-Leu prevents protein C activation the APC by cleavage between the Arg-Leu prevents protein C activation to APC by binding to this region. The DNA sequences encoding the variable regions of the heavy and light chains of the antibody (AAT05299-302) were used to construct humanised antibodies using the PCR primers AAT09303-9. The humanised antibodies are useful as inhibitors of coagulation and can be used for the treatment of tumours by inhibiting the anticoagulant activity of APC by preventing conversion of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         58 CAGGTTACTCTGAAAGAGTCTGGCCCTGGGATATTGCAGCCCTCCCAGACCCTCACTCTG 117

```
The sequence of the gene encoding the heavy chain variable region of the mouse anti-human interleukin-6 (IL-6) antibody. The fragment was amplified by primers (AAQ756.87) from cDNA derived from mRNA from mouse SK2 hybridoma cells. The fragment was cloned into plasmid pUC19 concerned pasmid pUC-SK2-Vh. The inserted fragment is used to generate constructs (see AAQ75914-7) encoding fragments of an antibody to the human IL-6 comprising (a) a light chain with (i) a variable region containing 3 complementarity determining regions (CDN) (AAR77201-3) inserted into several framework regions (FR) (AAR77201-3) and (ii) a human light chain constant region and (b) a heavy chain with (i) a variable region containing 3 CDR (AAR77212-4) inserted into an FR (AAR77215-8) and (ii) a human light chain constant region. The FR of the light chain may be mouse derived (AAQ75888) or from the human antibody REI. The heavy chain FR may also be mouse derived (AAQ75888) or from the human antibody CDAW. The antibodies are used in the treatment of IL-6 related disorders. The antibodies are used in the treatment of IL-6 related disorders. The natived sequences and low antigenicity mouse derived
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CAGGTTACTCTGAAAGAGTCTGGCCCTGGGATATTGCAGCCCTCCCAGACCCTCAGTCTG 117

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
The present sequence is the coding sequence of the heavy chain variable region (VH) of the murine monoclonal antibody SWLAZ (19G9), which binds specifically to the surface antigens of cariogenic type c Streptococcus mutans (ATCC 25.75). The coding sequence was cotained from SWLAZ (ATCC HB 12560) hybridoma calls by PCR amplification (see also ABN84625 and ABN84622). The SWLAZ VH and VL (see ABN84608) coding sequences were used in the preparation of chimeric monoclonal antibody TEFE comprising SWLAZ variable regions and human antibodies can be used to prevent or treat dental caries in humans. The antibodies can be used to prevent or treat dental caries in humans. The antibodies can be used to prevent or treat dental caries in humans system when they bind cariogenic organisms, resulting in their destruction. The antibodies may be produced in edible plants, in transgenic animals, or in chicken eggs for oral ingestion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              301 GTCTCTCTAACTGCCT---ATGCTATGGACTACTGGGGTCAAGGAACCTCAGTCACCGTC
